Course Description

This 1-week, accelerated on-demand course builds upon Google Cloud Platform Big Data and Machine Learning Fundamentals. Through a combination of video lectures, demonstrations, and hands-on labs, you'll learn how to build streaming data pipelines using Google Cloud Pub/Sub and Dataflow to enable real-time decision making. You will also learn how to build dashboards to render tailored output for various stakeholder audience.

Prerequisites:

- Google Cloud Platform Big Data and Machine Learning Fundamentals (or equivalent experience)
- Some knowledge of Java

Objectives:

- Understand use-cases for real-time streaming analytics
- Use Google Cloud PubSub asynchronous messaging service to manage data events
- Write streaming pipelines and run transformations where necessary
- Get familiar with both sides of a streaming pipeline: production and consumption
- Interoperate Dataflow, BigQuery and Cloud Pub/Sub for real-time streaming and analysis

✔ Account Verification

This person's account is verified. Coursera certifies their successful completion of the course work.

Frequently Asked Questions

How should I list my course on my resume/C.V.?

We'd recommend "Building Resilient Streaming Systems on Google Cloud Platform by Google Cloud on Coursera. Certificate earned at Monday, July 15, 2019 5:29 AM GMT".
